

EECS 203: Discrete Mathematics
Winter 2024
Assignment 0: Course Policies & Page-Matching

Due **THURSDAY, Jan. 18**, 10:00 pm

No late homework accepted past midnight.

Number of Problems: 9

Total Points: 100

Like all future homeworks, this assignment should be submitted as a PDF through Gradescope (see instructions on course site for more details). We strongly prefer students to compose homework solutions using a word processor (Google Docs or MS Word), or ideally using \LaTeX , but we will accept handwritten homework submissions scanned/photographed and converted to PDF. Note that submitted files must be less than 50 mb in size, but they really should be much smaller than this. No email or Piazza regrade requests will be accepted. For more detail on regrade requests, please refer to course policies.

- We will not grade homework problems that were not properly matched on Gradescope. Please submit early and often and double-check that you matched each question to the page(s) where your solution appears.
- Explanation or justification for yes/no, true/false, multiple choice questions, and the like: You must provide some sort of explanation or justification for these types of questions (so we know you didn't just guess), unless explicitly specified in the problem statement. For example, simply answering "true" for a T/F question without providing an explanation will receive little or no credit.
- All problems require work to be shown. Questions that require a numerical answer will not be given credit if no work/explanation is shown.
- Honor Code: By submitting this homework, you agree that you are in compliance with the Engineering Honor Code and the Course Policies for 203, and that you are submitting your own work.
- Hyperlinks on Submitting Homework to Gradescope: [textcolorblueInstructions](#) or [Youtube Video](#)

1. Did You Read The First Page? [6 points]

Did you read the first page? We get it, it's a lot of words. Please give it a read! It's important information that you'll want to know as you complete homework assignments throughout the semester to **avoid losing points from logistical mistakes** ☺. After you've given the first page a careful read over, write what you're most excited about in 2024 as your "answer" to this question.

Solution:

In 2024 I'm most excited to meet new people and learn new things!

2. A Thing About Page Matching [6 points]

You must match your pages to the problems on Gradescope in order to receive credit. Please note as soon as you press submit, you've successfully submitted by the deadline. You can still match the pages with no rush, that doesn't add to your submission time. Write down your favorite class so far to affirm you've read and understand this.

Solution:

My favorite class so far is Japanese. It's a fun break from all the STEMmy engineering classes I'm taking this semester.

3. Resource Location [12 points]

Where can you find each of the following resources? No justification necessary.

- (a) Lecture slides, lecture recordings, course announcements
- (b) Scheduled office hours
- (c) Questions and answers about course content and logistics (online forum)

Solution:

- (a) Canvas
- (b) Canvas/Office Hours Calendar
- (c) Piazza

4. Exam dates [12 points]

What are the dates and times of the three course exams? No justification necessary.

Solution:

Exam 1: Monday, February 19, 7:00 - 9:00 pm

Exam 2: Wednesday, March 27, 7:00 - 9:00 pm

Exam 3: Tuesday, April 30, 7:00 - 9:00 pm

5. Regrade Requests [16 points]

- (a) Where do you submit a regrade request?
- (b) What is the deadline for submitting regrade requests? Select **one** of the following:
 - (i) by the last day of classes
 - (ii) by the next exam
 - (iii) 24 hours after the assignment's grades have been released
 - (iv) 1 week after the assignment's grades have been released
- (c) When should you submit a regrade request? Select **any number** of the following:
 - (i) I feel like I deserve more points
 - (ii) My solution was incorrectly graded according to the posted rubric
 - (iii) I have an alternate solution I think is right
 - (iv) I have an alternate solution I think is right, and I checked it with an instructor in office hours or on Piazza
- (d) What 3 things should you make sure to (re)read before submitting a regrade request?

Solution:

- (a) Gradescope
- (b) iv
- (c) ii
- (d) My submitted solution, the solution from the course, and the rubric

6. Admin Form [8 points]

What is the best way to contact course staff about individual administrative concerns, and where can you find the link?

Solution:

The [admin form](#), found on the front page of the course Canvas page.

7. Reflection [8 points]

What strengths, strategies, and resources do you have to help you succeed in each of following?

- (a) Weekly assignments
- (b) Exams

Solution:

Resources: Piazza, ECoach, lecture/discussion recordings, problem roulette, office hours, peers, previous exams, etc. You should work together with classmates on weekly assignments to pool more knowledge. Do a lot of practice problems for exams, and make sure to attempt them all before looking at the solutions.

8. Exponents [16 points]

Compute the value of each of the following. We encourage you to keep it in exponential form as long as you can, for practice. **Remember to show your work.**

(a) 5^3

(b) $2^3 \cdot 2^2$

(c) $\frac{3^6}{3^3}$

(d) 5^0

(e) $(2^4)^2$

(f) $2^{(4^2)}$ (use a calculator for this one if you need to!)

(g) $16^{\frac{1}{2}}$

(h) 16^{-2}

Solution:

(a) $5^2 \cdot 5 = 25 \cdot 5 = 125$

(b) $2^3 \cdot 2^2 = 2^5 = 32$

(c) $\frac{3^6}{3^3} = 3^{6-3} = 3^3 = 27$

(d) $5^0 = 5^1/5^1 = 1$

(e) $(2^4)^2 = 2^{4 \cdot 2} = 2^8 = 256$

(f) $2^{(4^2)} = 2^{16} = 65536$

(g) $16^{\frac{1}{2}} = (4^2)^{\frac{1}{2}} = 4$

(h) $16^{-2} = \frac{1}{16^2} = \frac{1}{256}$

9. Logarithms [16 points]

Compute the value of each of the following. If the answer does not come out cleanly and results in an infinite decimal expansion, write “*too hard to compute*.” If the result is not defined, write “*undefined*.” For any question referencing x or y , let $\log_5(x) = 2.6$ and $\log_5(y) = 5.2$. **Remember to show your work.**

(a) $\log_2 64$

(b) $\log_7 7$

(c) $\log_7 1$

(d) $\log_7 0$

(e) $\log_5(x + y)$

(f) $\log_5(xy)$

(g) $\log_2(x)$

(h) $\log_5(x^{25})$

Solution:

(a) $\log_2 64 = \log_2(2^6) = 6$

(b) $\log_7 7 = 1$

(c) $\log_7 1 = 0$

(d) $\log_7 0 = \text{undefined}$

(e) $\log_5(x + y) = \log_5(5^{2.6} + 5^{5.2}) = \text{too hard to compute}$

(f) $\log_5(xy) = \log_5(5^{2.6} \cdot 5^{5.2}) = \log_5(5^{2.6+5.2}) = 2.6 + 5.2 = 7.8$

(g) $\log_2(x) = \log_5(x) / \log_5(2) = \text{too hard to compute}$

(h) $\log_5(x^{25}) = 25 \log_5(x) = 25 \cdot 2.6 = 65$
